

Windows and glazing

High quality, highly functional efficiency and excellent insulation

Our sectional garage doors can be fitted with windows or glazed sections for extra natural light and vision, or simply for visual effect. The window variants are doubleglazed and offer excellent insulation performance.

Two types of window are available. In terms of the choice of material and insulation performance, both types of window are based on our experience in manufacturing sectional doors for industrial and commercial applications.

Design

The decorative round window can be used to create unusual effects and patterns in the door leaf. The elegant stainless steel window trims enhance the designer look of the door leaf.
